

Data Governance for European Union Medical Device Regulation

This year, the European Union Medical Device Regulation (MDR) will implement rules in place concerning how medical devices for human use will be available on the market.

Data Governance is critical for MDR compliance.

For example, Data Governance teams need to establish the following disciplines for MDR compliance.

- Ownership and Stewardship of Product Data
- Identification of Critical Data Elements such as Trade Name and Risk Class

Information Asset's Data Governance In-a-Box methodology ties people, process and technology to support compliance with the MDR. For more information, please visit information-asset.com.
